

Oztik[®] - Pour-on Tick Development Inhibitor

For the Control of Cattle Tick (Boophilus microplus) on Beef Cattle.

Active Ingredients: 25g/L Fluazuron + solvents

Similar or equivalent products: Acatak[®] (Novartis), Wintix[®] (Ancare, Novartis), Tik Bos[®] (agVantage) & Tik Shot[®] (agVantage)

Withholding Periods:

Meat – Do not use 42 days before slaughter for human consumption.

Milk – Do not use on cattle which are producing or may in the future product milk for human consumption.

Export Slaughter Interval (ESI): Do not use less than 42 days before slaughter for export.

Pack Sizes: 5L, 20L

Dose Rate: 3mL per 50kg Liveweight

101-150kg – 9mL, 151-200kg – 12mL, 201-250kg – 15mL, 251-300kg – 18mL,
301-350 – 21mL, 351-400kg – 24mL, 401-450kg – 27mL, 451-500kg – 30mL,
501-550kg – 33mL, 551 – 600kg – 36mL, 601-651kg – 39mL.

Over 650kg – 3mL per 50kg Liveweight.

Administration: Pour-on applied in 2 bands, approx 7cm wide, one each side of the spine between the rump and the shoulders.

Restraint: Not to be used on cattle which are producing or may in the future product milk for human consumption. This product cannot be used on pregnant cows within 6 weeks of calving to avoid handling stress.

Use: Oztik[®] is used as a tick development inhibitor and is used for the strategic control of cattle tick, Boophilus microplus (including all known acaricide resistant strains) on beef cattle. The major active ingredient Fluazuron is known as an IGR (Insect Growth Regulator) which interrupts the tick life cycle by interfering with cuticle formation during their development stage.

Benefits: Provides up to 12 weeks protection from a single treatment and gives adequate control for prolonged periods. Breaks the tick breeding cycle reducing pasture contamination. Calves receive adequate protection when suckling on their mothers.
